The European economy in 2017 – or, the post-Brexit EU

By Jérôme Creel

The just released *L'économie européenne 2017* provides a broad overview of the issues being posed today by the European Union project. Brexit, migration, imbalances, inequality, economic rules that are at once rigid and flexible… the EU remains an enigma. Today it gives the impression of having lost the thread of its own history or to even to be going against History, such as the recent international financial crisis or in earlier times the Great Depression.

A few months after the bankruptcy of Lehman Brothers, the G-20 Summit of the heads of State and Government held in London in April 2009 drew up a list of recommendations to revive the global economy. These included implementing active fiscal and monetary policies, supporting the banks and improving banking regulation, rejecting the temptation of protectionism, fighting against inequality and poverty, and promoting sustainable development.

These recommendations were in contrast to the policies implemented shortly after the Great Depression back in the 1930s. At that time, economic policies started with restrictive measures, thereby fueling the crisis and rising inequality. Protectionism in that epoch became not just a temptation but a reality: tariff and non-tariff barriers were erected in an effort to protect local business from international competition. We know what happened later: the rise of populism and extremism that plunged Europe, and then the world, into a terrible war. The economic lessons learned from the catastrophic management of the 1930s crisis thus contributed to the recommendations of the London G-20 Summit.

What now remains of these lessons in Europe? Little, ultimately, other than a resolutely expansionary monetary policy and the establishment of a banking union. The first is meant to alleviate the current crisis, while the second is intended to prevent a banking crisis in Europe. While this is of course not nothing, it is based on a single institution, the European Central Bank, and is far from sufficient to answer all the difficulties hitting Europe.

Brexit is one of these: as the first case of European disintegration, the departure of the United Kingdom poses the issue of the terms of its future partnership with the European Union (EU) and re-raises the question of protectionism between European states. The temptation to turn inwards is also evident in the way that the refugee crisis has been managed, which calls for the values of solidarity that have long characterized the EU. Differences between EU Member States in terms of inequality, competitiveness and the functioning of labour markets require differentiated and coordinated policies between the Member States rather than the all-too homogeneous policies adopted up to now, which fail to take an overall view.

This is particularly true of the policies aimed at reducing trade imbalances and those aimed at cutting public debts. By applying fiscal rules to manage the managing public finances, even if these are not perfectly respected, and by imposing quantitative criteria to deal with economic and social imbalances, we lose sight of the interdependencies between the Member States: fiscal austerity is also affecting our partners, as is the search for better price competitiveness. Is this useful and reasonable in a European Union that is soon to be the EU-27, which is seeing rising inequalities and struggling to find a way to promote long-term growth?

L'économie européenne 2017 takes stock of the European Union in a period of severe tensions and great uncertainty, following a year of average growth and before the process of separation between the EU and the UK really begins. During this period, several key elections in Europe will also serve as stress tests for the EU: less, more or better Europe – it will be necessary to choose.
